

# Are you using Av-DEC Polyurethane Antenna Gaskets?

What if you could create an additional line of  
defense against corrosion?

## Secure the perimeter of the antenna with Av-DEC's fast-curing Thixoflex Black<sup>®</sup> injectable sealant.

Av-DEC Polyurethane Antenna Gaskets deliver improved avionics reliability and offer a complete environmental seal. Av-DEC Thixoflex Black (TG3212) makes the perfect complement to the gasket system by completely sealing off the antenna base and exposed area. Implementing Thixoflex Black as a perimeter sealant to the antenna provides an additional moisture barrier to protect against corrosion.

## What are the benefits of using Av-DEC Thixoflex Black injectable sealant?

Thixoflex Black has a return-to-service time of two hours and is UV-resistant and waterproof. The sealant is non-hazardous, so no hazmat paperwork is needed. Unlike polysulfide sealants, removal of Thixoflex Black is clean and easy with little or no residuals to clean up.
